INTRODUCTION

This document was developed by the U.S. Public Health Service, National Center for Radiological Health, to aid in the retrieval of articles from the *Journal of Nuclear Medicine*. For convenience, the document is divided into three sections: KWIC INDEX, AUTHOR INDEX, and BIBLIOGRAPHY INDEX.

KWIC INDEX

This index is a listing of each article published in the *Journal of Nuclear Medicine* from 1960 through 1967 (Volumes 1-8). The index is sorted alphabetically on permutation of the key words in each article. A one-line entry appears for each key word in the article title. The asterisk indicates the last word in the title. To the right of each entry is a six-digit accession number indicating the Journal volume and article page number (two digits for the volume number and four digits for the page number).

The length of the title appearing in this index is limited by the computer program used to generate the KWIC. Thus, if the complete title is needed, it can be located in the bibliography index by using the accession number.

AUTHOR INDEX

Three columns are used in the AUTHOR INDEX. The first column contains the accession numbers. The second column is an alphabetical listing of the authors who have contributed articles to the *Journal of Nuclear Medicine*. The third column contains one-digit numbers to indicate the author order (first author, second author, and so forth). A "1" not only indicates the first author of a group, but also a single author.

BIBLIOGRAPHY INDEX

The BIBLIOGRAPHY INDEX gives the complete titles of each article, the author(s), and the volume, number, pages, and year in which the article appeared in the *Journal of Nuclear Medicine*. The citations are listed in accession number order. With these accession numbers the reader can take an entry from the KWIC INDEX or the AUTHOR INDEX and locate the article in either the BIBLIOGRAPHY INDEX or directly in the Journal.

CHANGES

In many cases, the exact title as it appears in the Journal was modified because of the computer system limitations (e.g., no superscripts, lower case, or Greek symbols). The radionuclide designations were changed so that they could be grouped alphabetically in the KWIC INDEX. Also, hyphens were either added or deleted to facilitate

alphabetical listing of key words in the KWIC INDEX. Examples of the changes are:

(a) carbon dioxide replaces CO_2

(b) I-125 replaces ^{125}I or Iodine-125

(c) gamma-ray replaces γ-ray

(d) in-vitro replaces in vitro.

NEGATIVE WORDS

The computer was programmed to reject certain title words, such as all two-letter words and other nondescriptive words. The following words were not considered important for retrieval purposes:

The ABSTRACT CARDS below are designed to facilitate document retrieval using Coordinate Indexing. They provide space for an accession number (to be filled in by the user), suggested key words, bibliographic information, and an abstract.

The Coordinate Index concept of reference material filing is readily adaptable to a variety of filing systems. Coordinate Indexing is described in the publication "IBM Data Processing Techniques - Index Organization for Information Retrieval" (C 20-8062). Copies are available through IBM Branch Offices.

The cards are furnished in triplicate to allow for flexibility in their use (e.g., author card index, accession number card index).

KWIC INDEX to the JOURNAL of NUCLEAR MEDICINE (1960-1967)

Accession N

Public Health Service Publication No. 1831 (May 1968); RMS; MORP; NCRH; PHS; DHEW.

This report is a bibliographic reference to the Journal of Nuclear Medicine. It gives a complete bibliography of all articles appearing in the journal from 1960 through 1967. The report consists of three indices: 1) KWIC Index (Key Word In Context Index), 2) Author Index, and 3) Bibliography by accession number.

KEY WORDS:
Bibliography, Nuclear medicine.
